Natl. Acad. Sci. U.S.A. 80:3218-3222(1983).

-!- FUNCTION: Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound care involved in cell adhesion, cell motility, opsonization, wound care involved in cell adhesion, cell shape.

-!- SUBGNIT: Mostly heterodimers or multimers of alternatively spliced variants, connected by 2 disulfide bonds near the carboxyl ends; co a lesser extend homodimers.

-!- SUBCELLULAR LOCATION: Screted; extracellular matrix.

-!- ALTERNATIVE PRODUCTS:

Comment=A number of isoforms are produced. Each of the "extra domain" and the connecting strand 3 are present in some forms of fibronectin and absent in others;
                                                                                                                                                                                                                                                                                                           PARTIAL SEQUENCE.

-!-TISSUE SPECIFICITY: Plasma FN (soluble dimeric form) is secreted by heparocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.
-!-FM: Sulfated (By similarity).
-!-SIMILARITY: Contains 12 fibronectin type II domains.
-!-SIMILARITY: Contains 15 fibronectin type III domains.

DOWN-REGULATION BY GLUCOCORTICOIDS.

MEDLINE=21600963; PubMed=11737251;
Gu Y.-C., Taller J.F., Gullberg D., Timpl R., Ekblom M.;
Gu Y.-C., Taller J.F., Gullberg D., Timpl R., Ekblom M.;
Glucocorticoids down-regulate the extracellular matrix proteins
fibronectin, fibulin-1 and fibulin-2 in bone marrow stroma.";
Eur. J. Haematol. 67:176-184(2001).
-!- FUNCTION: Fibronectins bind cell surfaces and various compounds
including collagen, fibrin, heparin, DNA, and actin. Fibronectins
are involved in cell adhesion, cell motility, opsonization, wound
healing, and maintenance of cell shape.
-!- SUBUNI: Mostly heterodimers or multimers of alternatively spliced
variants, connected by 2 disulfide bonds near the carboxyl ends;
to a lesser extend homodimers. Interacts with FBLN1 and LGALSIBP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/
  domain" and the connecting strand 3 are present in some forms of fibronectin and absent in others;
                                                                      Isoid=P11276-1; Sequence-Displayed;
TISSUB SPECIFICITY: Plasma FN (soluble dimeric form) is secreted by hepatocyces. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.

INDUCTION: Glucocorticoids suppressed mRNA expression and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3D-structure; Acute phase; Alternative splicing; Cell adhesion; Glycoprotein; Heparin-binding; Phosphorylation; Plasma; Repeat; Signal; Sulfation.

by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibrioblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.

1- PTM: Sulfated (By similarity)

1- SIMILARITY: Contains 12 fibronectin type I domains.

1- SIMILARITY: Contains 2 fibronectin type II domains.

1- SIMILARITY: Contains 17 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE OF 1183-1192; 1385-1399 AND 2287-2300, AND INTERACTION WITH

IISOUS SPECIFICITY: In early Xenopus embryo, cellular forms of fibronectin predominate which include both extra domains. In fibronectin of embryonic and adult liver the connecting strand can be either completely excluded or included.
SIMILARITY: Contains 12 fibronectin type I domains.
SIMILARITY: Contains 2 fibronectin type II domains.
SIMILARITY: Contains 17 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Proteins with cell migration stimulatory activity used in treating wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. The present sequence represents the human fibronectin

Fibrin-binding sites can be prepd. by enzymatic cleavage of fibronectin, peptide synthesis or by recombinant DNA techniques. They are used to detect a fibrin-binding target site, to treat disorders involving abnormal fibrinolysis or fibrinogenesis, to disrupt blood clots and to aid delivery of medicaments to fibrin- contg. sites. They show high affinity to and slow dissociation from fibrin, and provide fast diffusion and rapid clearance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         thrombi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Revised record issued on 21-OCT-2004 : Correction to Feature Table Key

The present invention relates to a method for enhancing proliferation or inducing apoptosis of erythroid progenitor cells (EPCs). The method involves culturing haematopolatic cellular populations containing EPCs in the presence of a polypeptide having an integrin very late antigen (VLA) induced, genetic or congenital erythroid disorders. Methods of the invention are useful in diagnostic assays of progenitor cells, e.g. cells occurring in pathologic states such as anaemia or polycythaemia and in the study of erythroid cell development. They are used in the screening of agents which inhibit or prevent appprosis of erythroid cells. The present sequence is a human protein related to the modulation of proliferation of EPCs. This sequence is used in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to obtaining a population of quiescent haematopoietic cells (HC), comprising culturing HC while adhering the cells to a polypeptide having a very late antigen-4 (VLA-4) binding site, in particular fibronectin polypeptide, so as to expand the number of HC, where the adhering provides an increased percentage of quiescent HC. Also included are inducing apoptosis of a subpopulation of HC, by contacting the cells with a polypeptide having a VLA-4 binding site under conditions to cause apoptosis of a subpopulation of HC and a medium for culturing HC which enriches quiescent HC, comprising a fibronectin polypeptide. The method is useful for obtaining a cell population containing quiescent haematopoietic cells which are useful for treating a subject. Use of the VLA-4 containing peptide is useful for inducing apoptosis of a subpopulation of CD34+ HC oppulation. The present sequence is human fibronectin which contains then VLA-4 binding site used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The invention describes genes (I) which are differentially regulated in prostate cancer. (I) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where the number is indicative of the probability that the sample comprises prostate cancer. (I) Is useful for assessing a therapeutic or preventive in expression levels in a sample comprising prostate tissue of target genes which are differentially-regulated in prostate cancer. (I) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer. (I) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer cells, which involves contacting a polypeptide differentially-regulated for cells, which involves contacting a polypeptide differentially regulated concer cells, which a test agent modulates the biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (I) is useful as molecular markers, as drug targets, and for detecting, proventing or treating, determining to prostate cancer. (I) and its expression conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test to assay for presence of cancer conducts are used in the diagnostic test energy.

The ZmaxI and HBM genes have osteopathic activities. The genes can be used in gene therapy, antisense therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, the diagnosis and treatment of bone disorders including osteoporosis, agget's disease, sclerostosis, osteomalacia and fibrous dysplasia.

ö
of cancer, its stage of development, the nature of genetic defect, etc. The polypeptide encoded by (1) can be used as target for therapy or drug discovery. (1) can also be used for expressing the polypeptide and thus for searching specific binding partners of the polypeptide. (1) is useful in therapeutic applications to treat prostate cancer. The identification of specific genes, and groups of genes, expressed in pathways physiologically relevant to prostate cancer permits the definition of functional and disease pathways and the delineation of targets in these pathways which are useful in diagnostic, therapeutic, and clinical applications. This is the amino acid sequence of a protein differentially
                                                                                                                                                                                                                                                                                                                                                                            120

The invention relates to novel transgenic animals expressing the high bone mass (HBW) gene, expressing the corresponding wild type HBM gene, comprising an alteration of the gene encoding LMPS or expressing an LMPS that is modulated by an altered gene control sequence introduced an LMPS that is modulated by an altered gene control sequence introduced can impose the study of bone density modulation. The transgenic animals are for the study of bone mass modulation. The cinvention may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density modulation, where the concentration may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density, modulation, where the concentration may have a use an appearance of the same concentration may have a use as a secret of concentration may have a use as a secret of concentration may have a use as a secret from bone density, bone strength, trabecular number, bone size, or bone tissue connectivity. The transgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing pharmaccutical compositions, which may be employed for treating or preventing bone diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or neoplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for disquesce involved in bone development, cor characterised by reduced bone density or mass. The present sequence is used in the exemplification of the invention

The present invention describes a method (M1) for diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, or determining the presence of cancer cells or outcome of a cancer patient. M1 involves providing a set of genes that are differentially expressed in cancerous or non-cancerous conditions, determining the expression levels of the set of genes and calculating a ratio of the expression levels of the differentially expressed genes. M1 is useful for diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, where the cancer is malignant pleural mesothelioma (MPM), lung adenocarcinoma, squamous carcinoma, prostate cancer, breast cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, diffuse large B-cell prognosis or outcome of a cancer patient. The ratio of expression levels of differentially expressed genes is used as an indicator of cancer type, cancer class, and/or cancer prognosis, all of which are useful for determining a course of treatment of a patient. The present sequence represents a human protein which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing cancer cells in tissue sample, or determining prognosis or outcome of cancer patient, by calculating ratio of expression levels of genes that are differentially expressed in cancer and non cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QAQQMYQPQSPVAVSQSKPGCYDNGKHYQINQQMERTYLGNVLVCTCYGGSRGFNCESKP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ACF12828 to ACF12947 encode the human cervical cancer marker proteins (I) given in ABR92047 to ABR92164. A higher level of expression of (I) than normal indicates the presence of cervical cancer. Also described: (1) a vector (II) containing (I); (2) a host cell (III) containing (I); (3) a sassessing (M1) whether a patient is afflicted with cervical cancer, comprising comparing the level of expression of a marker in a patient's sample, and the normal level of expression of the marker in a control norcervical cancer sample, where a significant increase in the level of expression of the marker in the patient's sample is an indication that the patient is afflicted with control sample is an indication that the patient is afflicted with therapy and in vaccines. (I) has cytostatic activity, and can be used in gene therapy and in vaccines. (I) is useful in detecting, characterising, preventing and treating human cervical cancers. (I) may also be used in various prognostic and diagnostic assays, pharmacogenomics and in
                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid molecule useful for detecting, characterizing, preventing and treating human cervical cancers, in various prognostic and diagnostic assays, in pharmacogenomics and in monitoring clinical trials.

The present invention relates to regulating LRP5, LRP6 or HBM activity in a subject comprising administering a composition which modulates a Dkk activity. The method is useful for modulating lipid levels and/or bone mass and is useful in treating or diagnosing abnormal lipid levels and bone mass disorders, such as osteoporosis, bond fracture, age-related loss of bone, a chondrodystrophy, drug-induced bone disorder, high bone steomalacia, osteomyalitis, Paget's disease, osteoarchritis, and rickers. Modulators of Dkk activity are useful for as reagents in studying bone mass and lipid level modulation, in modulating whit signaling, or treating Dkk-mediated disorders. The present sequence represents a human protein sequence related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Regulating LRP5, LRP6 or HBM activity in a subject, useful for modulating lipid levels and/or bone mass, and for in treating bone mass disorders, e.g. osteoporosis, comprises administering a composition which modulates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  EAEFTCFDKYTGNTYRVGDTYERPKDSMIWDCTCIGAGRGRISCTIANRCHEGGQSYKIG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to High Bone Mass (HBM), LRPS (Zmax1) and LRP6 mutants, which results in a HBM-like phenotype when expressed in a cell. The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EAEETCFDKYTGWTYRVGDTYERPKDSMIWDCTCIGAGRGRISCTIANRCHEGGGSYKIG 124

                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method of diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, determining prognosis or cells or non-cancer cells in a tissue sample, determining prognosis or cutcome of a cancer patient, selecting a course of treatment for a subject having or suspected of having malignant pleural mesothelioma (MPM) and evaluating treatment of MPM comprising determining the ratio of the expression level of a set of genes differentially expressed in a cancer tissue. The cancer is chosen from MPM, lung adenocarcinoma, cancer tissue. The cancer is chosen from MPM, lung adenocarcinoma, squamous carcinoma, medulloblastoma, prostate cancer, breast cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer. The method is useful for diagnosing MPM in a subject suspected of being cancerous from a subject and determining the expression of nucleic acid markers or its expression products in the tissue sample. This sequence represents a human MPM protein of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html.

The tryptase-6 complex inhibitory peptides of the invention comprise the sequence of a fragment of the fibronectin (residues 1351-1356). Sequences shown in AMM63160 to AAM63169 represent mouse mast cell protease (mMCP-6) inhibitory peptides. These peptides which are tryptase-6 complex inhibitors, can be used for treating a mast cell-mediated inflammatory disorder. The inhibitors can be used to treat inflammatory disorders including asthma, allergic rhinitis, urticaria and antioedema, eczematous dermatitis (atopic dermatitis), anaphylaxis, hyperproliferative skin disease, peptic ulcers, inflammatory bowel disorder, hyperresponsiveness and inflammatory skin conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tryptase-6 complex inhibitory peptides - used to treat mast cell-mediated inflammatory disorders e.g. asthma.

                            Hybrid proteins have a tissue-binding domain (TBD) from 1 protein linked to a crosslinking domain from another protein. The TBD comprises: aa 2-926, 928-1338 and especially 2-1336 of the sequence given in AAR6019; the heparin-binding domain (aa 1812-1710 of AAR60021) of fibronectin; the collagen-binding domain (aa 282-608 of AAR60021) of fibronectin; or the cell-binding domain (aa 1357-1903 or 1532- 1631 of AAR60020) of fibronectin in AQ70007, and sequences for fibronectin and fibrinogen hybrid is given in AAQ70007, and sequences for fibronectin and fibrinogen-alpha in AAQ70008 and AAQ70009, respectively. (Updated on 25-MAR-2003 to correct PN field.)

             This sequence represents the amino acid sequence of human fibronectin, a widely distributed glycoprotein present in extracellular matrices. The protein contains the motifs IGDS (AAM99553) and IGDQ (AAM99594) which can be used in peptides to stimulate cell migration for wound healing, periodontal tissue regeneration, angiogenesis, inhibition of tumour invasion and metastasis, and in relation to inflammation or connective

A, Title: Partial primary structure of bovine plasma fibronectin: three types of internal
A, Reference number: A23292
A, Molecule type: protein
A, Residues: 1-16, C', 18-20, S', 22-432,447-463;1367-1517;1567-1673;2062-2176, N', 2178-226
C, Comment: The plasma fibronectin molecule consists of two chains, which are connected by C, Comment: Plasma fibronectin molecule consists of two chains, which are connected by C, Comment: Plasma fibronectin synthesized by hepatocytes.
C, Comment: Plasma fibronectin is synthesized by hepatocytes.
C, Superfamily: fibronectin is synthesized by hepatocytes.
C, Superfamily: fibronectin type I repeat homology; fibronectin type I repeat homology <1F2>
C, Reywords: acute phase; alternative splicing; collagen binding; duplication; extracellu F; 21-44/Domain: fibronectin type I repeat homology <1F2>
F; 66-104/Domain: fibronectin type I repeat homology <1F3>
F; 110-148/Domain: fibronectin type I repeat homology <1F3>
F; 155-194/Domain: fibronectin type I repeat homology <1F3>

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                     September 30, 2005, 08:57:15 ; Search time 33.6978 Seconds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 10
